# Medicine & Surgery (MBChB)

A comprehensive academic handbook covering medical sciences, clinical practice, diagnostics, patient care, public health, and professional medical ethics.

# Page 2: Human Anatomy

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 3: Human Physiology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

- Apply medical knowledge to diagnose and manage health conditions.
- Demonstrate effective clinical and communication skills.
- Interpret laboratory and diagnostic findings accurately.
- Provide ethical, patient-centered care across diverse settings.
- Engage in lifelong learning and evidence-based practice.

# Page 4: Biochemistry

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 5: Pathology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

- Apply medical knowledge to diagnose and manage health conditions.
- Demonstrate effective clinical and communication skills.
- Interpret laboratory and diagnostic findings accurately.
- Provide ethical, patient-centered care across diverse settings.
- Engage in lifelong learning and evidence-based practice.

# Page 6: Pharmacology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 7: Microbiology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 8: Immunology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 9: Clinical Skills

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 10: Internal Medicine

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 11: General Surgery

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 12: Pediatrics

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 13: Obstetrics and Gynecology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 14: Psychiatry

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 15: Radiology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

- Apply medical knowledge to diagnose and manage health conditions.
- Demonstrate effective clinical and communication skills.
- Interpret laboratory and diagnostic findings accurately.
- Provide ethical, patient-centered care across diverse settings.
- Engage in lifelong learning and evidence-based practice.

# Page 16: Emergency Medicine

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

- Apply medical knowledge to diagnose and manage health conditions.
- Demonstrate effective clinical and communication skills.
- Interpret laboratory and diagnostic findings accurately.
- Provide ethical, patient-centered care across diverse settings.
- Engage in lifelong learning and evidence-based practice.

# Page 17: Community Health

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 18: Family Medicine

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 19: Epidemiology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 20: Medical Research

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

- Apply medical knowledge to diagnose and manage health conditions.
- Demonstrate effective clinical and communication skills.
- Interpret laboratory and diagnostic findings accurately.
- Provide ethical, patient-centered care across diverse settings.
- Engage in lifelong learning and evidence-based practice.

# Page 21: Medical Ethics

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

- Apply medical knowledge to diagnose and manage health conditions.
- Demonstrate effective clinical and communication skills.
- Interpret laboratory and diagnostic findings accurately.
- Provide ethical, patient-centered care across diverse settings.
- Engage in lifelong learning and evidence-based practice.

# Page 22: Neurology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

- Apply medical knowledge to diagnose and manage health conditions.
- Demonstrate effective clinical and communication skills.
- Interpret laboratory and diagnostic findings accurately.
- Provide ethical, patient-centered care across diverse settings.
- Engage in lifelong learning and evidence-based practice.

# Page 23: Cardiology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

- Apply medical knowledge to diagnose and manage health conditions.
- Demonstrate effective clinical and communication skills.
- Interpret laboratory and diagnostic findings accurately.
- Provide ethical, patient-centered care across diverse settings.
- Engage in lifelong learning and evidence-based practice.

# Page 24: Oncology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 25: Infectious Diseases

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 26: Preventive Medicine

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

- Apply medical knowledge to diagnose and manage health conditions.
- Demonstrate effective clinical and communication skills.
- Interpret laboratory and diagnostic findings accurately.
- Provide ethical, patient-centered care across diverse settings.
- Engage in lifelong learning and evidence-based practice.

# Page 27: Human Anatomy

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

- Apply medical knowledge to diagnose and manage health conditions.
- Demonstrate effective clinical and communication skills.
- Interpret laboratory and diagnostic findings accurately.
- Provide ethical, patient-centered care across diverse settings.
- Engage in lifelong learning and evidence-based practice.

# Page 28: Human Physiology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

- Apply medical knowledge to diagnose and manage health conditions.
- Demonstrate effective clinical and communication skills.
- Interpret laboratory and diagnostic findings accurately.
- Provide ethical, patient-centered care across diverse settings.
- Engage in lifelong learning and evidence-based practice.

# Page 29: Biochemistry

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

- Apply medical knowledge to diagnose and manage health conditions.
- Demonstrate effective clinical and communication skills.
- Interpret laboratory and diagnostic findings accurately.
- Provide ethical, patient-centered care across diverse settings.
- Engage in lifelong learning and evidence-based practice.

# Page 30: Pathology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

- Apply medical knowledge to diagnose and manage health conditions.
- Demonstrate effective clinical and communication skills.
- Interpret laboratory and diagnostic findings accurately.
- Provide ethical, patient-centered care across diverse settings.
- Engage in lifelong learning and evidence-based practice.

# Page 31: Pharmacology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 32: Microbiology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 33: Immunology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 34: Clinical Skills

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 35: Internal Medicine

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 36: General Surgery

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 37: Pediatrics

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 38: Obstetrics and Gynecology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 39: Psychiatry

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 40: Radiology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 41: Emergency Medicine

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 42: Community Health

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 43: Family Medicine

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

- Apply medical knowledge to diagnose and manage health conditions.
- Demonstrate effective clinical and communication skills.
- Interpret laboratory and diagnostic findings accurately.
- Provide ethical, patient-centered care across diverse settings.
- Engage in lifelong learning and evidence-based practice.

# Page 44: Epidemiology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 45: Medical Research

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

- Apply medical knowledge to diagnose and manage health conditions.
- Demonstrate effective clinical and communication skills.
- Interpret laboratory and diagnostic findings accurately.
- Provide ethical, patient-centered care across diverse settings.
- Engage in lifelong learning and evidence-based practice.

# Page 46: Medical Ethics

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

- Apply medical knowledge to diagnose and manage health conditions.
- Demonstrate effective clinical and communication skills.
- Interpret laboratory and diagnostic findings accurately.
- Provide ethical, patient-centered care across diverse settings.
- Engage in lifelong learning and evidence-based practice.

# Page 47: Neurology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 48: Cardiology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.

# Page 49: Oncology

Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities. Medicine and surgery integrate scientific knowledge, clinical expertise, and compassionate care to diagnose, treat, and prevent disease. Students develop competencies in patient assessment, evidence-based practice, communication, and interdisciplinary collaboration through laboratory work, simulations, clinical rotations, and research activities.

**Key Learning Outcomes**

• Apply medical knowledge to diagnose and manage health conditions.
• Demonstrate effective clinical and communication skills.
• Interpret laboratory and diagnostic findings accurately.
• Provide ethical, patient-centered care across diverse settings.
• Engage in lifelong learning and evidence-based practice.
