

Doctor of Pharmacy (PharmD)

A comprehensive academic handbook exploring pharmaceutical sciences, clinical pharmacy, medication management, patient safety, and healthcare delivery systems.

Page 2: Pharmaceutical Chemistry

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 3: Pharmaceuticals

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 4: Pharmacology

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 5: Clinical Pharmacy

[illegible]

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 6: Pharmacokinetics

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 7: Pharmacotherapy

[illegible]

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 8: Toxicology

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 9: Medicinal Chemistry

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 10: Community Pharmacy

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 11: Hospital Pharmacy

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 12: Pharmacy Law

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 13: Drug Information

[illegible]

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 14: Public Health Pharmacy

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 15: Pharmacovigilance

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 16: Biostatistics

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 17: Patient Counseling

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 18: Compounding

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 19: Supply Chain Management

[illegible]

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 20: Research Methods

[illegible]

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 21: Professional Ethics

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 22: Infectious Diseases Pharmacotherapy

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 23: Oncology Pharmacy

[illegible]

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 24: Pediatric Pharmacy

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 25: Geriatric Pharmacy

[illegible]

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 26: Health Informatics

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 27: Pharmaceutical Chemistry

[illegible]

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 29: Pharmacology

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 30: Clinical Pharmacy

[illegible]

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 31: Pharmacokinetics

[illegible]

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 32: Pharmacotherapy

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 33: Toxicology

[illegible]

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 34: Medicinal Chemistry

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 35: Community Pharmacy

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 36: Hospital Pharmacy

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 37: Pharmacy Law

[illegible]

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 38: Drug Information

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 39: Public Health Pharmacy

[illegible]

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 40: Pharmacovigilance

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 41: Biostatistics

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 42: Patient Counseling

[illegible]

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 43: Compounding

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 44: Supply Chain Management

[illegible]

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

[illegible]

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 46: Professional Ethics

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 47: Infectious Diseases Pharmacotherapy

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 48: Oncology Pharmacy

[illegible]

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 49: Pediatric Pharmacy

[illegible]

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.

Page 50: Geriatric Pharmacy

Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements. Pharmacy education combines pharmaceutical sciences with direct patient care to optimize medication use and improve health outcomes. Students learn drug development, therapeutic decision-making, medication safety, and interprofessional collaboration through experiential learning and clinical placements.

Key Learning Outcomes

- Optimize medication therapy and patient outcomes.
- Evaluate drug efficacy, safety, and interactions.
- Provide evidence-based pharmaceutical care.
- Promote public health and medication safety.
- Demonstrate professionalism and ethical responsibility.
